AHMAD ESSAM ABU LABAN

Amman, Jordan | +962 798818545 | ahmadessam3300@gmail.com | Portfolio | LinkedIn | GitHub

Professional Summary

Application security researcher with hands-on experience in web and API penetration testing. Discovered and responsibly disclosed two high-severity vulnerabilities (CVSS 8.3 and 7.1) in live production systems, including an IDOR exposing 15,000+ records. Builds security tooling and automation from an AI-integrated MCP server bridging 50+ pentesting tools to browser-native API clients and fingerprinting systems using JavaScript/TypeScript, Node.js, and Python. Experienced with AWS, Linux, Docker, and networking.

Technical Skills

- Offensive Security: Web Application Penetration Testing, API Security Testing, OWASP Top 10, CVSS Scoring, Vulnerability Research & Reporting, OSINT, Wireless Security.
- Tools: Web & API: Burp Suite, WPScan, Sqlmap | Recon & Discovery: Amass, Subfinder, Httpx, Feroxbuster | Network: Nmap, Wireshark | Exploitation: Metasploit, Hashcat
- Cloud & Infrastructure: AWS EC2, Linux (Debian/Ubuntu), Docker, Networking, Nginx, CI/CD.
- Development & Automation: JavaScript, TypeScript, Node.js, Express.js, JWT, REST APIs, Python, Bash, Git & GitHub.

Projects

Nexus MCP — GitHub

- Built a high-performance MCP server (TypeScript) that bridges 50+ penetration testing tools with AI assistants like Claude Desktop, using profile-based toolsets to keep the AI's context window lean.
- Implemented automated multi-tool attack chains and structured findings storage, enabling end-to-end AI-assisted pentest workflows.

PingPoint — Browser-Native HTTP Client — GitHub

- Built a browser-native HTTP client (GET/POST/PUT/DELETE/PATCH, custom headers, real-time response timing) as a lightweight Postman alternative for API testing during web app assessments.

Web Fingerprinting & Client Data Exposure Audit — GitHub

- Developed a full-stack Node.js/Express/MongoDB app that fingerprints visitors via 17 independent signals (canvas, WebGL, audio, fonts, WebRTC) and persists them across sessions, demonstrating tracking that survives VPN and IP changes.
- Built a JWT-authenticated admin dashboard with real-time visit analytics, geolocation mapping, and cross-session identity matching.

Network Security Simulation — Evil Twin & Captive Portal — GitHub

- Engineered a Wi-Fi Evil Twin attack using hostapd and dnsmasq to spoof a legitimate AP and serve a captive login portal, capturing and validating credentials against WPA2 handshakes with hashcat.
- Documented mitigation strategies for enterprise Wi-Fi deployments based on the attack's findings.

Achievements

Responsible Disclosure — LMS (CVSS 8.3) — Write-up *April 2026*

- Discovered and responsibly disclosed a Cross-Context Script Execution vulnerability enabling unauthorized access to user data and grade manipulation.

Responsible Disclosure — SIS (CVSS 7.1) — Write-up *Dec 2025*

- Discovered and responsibly disclosed an IDOR vulnerability exposing sensitive records for 15,000+ users.

TryHackMe Advent of Cyber 2025 — Certificate *Dec 2025*

- Completed all 24 challenges covering SOC operations, web exploitation, log analysis, and digital forensics.

HackTheBox University CTF 2025 — Certificate *Nov 2025*

- Solved web exploitation challenges in a 1,014-team global university CTF

Bug Bounty — Authentication Bypass *Oct 2025*

- Identified a critical authentication bypass vulnerability, earning a $100 bounty award.

Training

42 Amman — Advanced Digital Skills Program *Sep 2026 - Nov 2026*

- Completed a peer-to-peer, project-based curriculum with no lectures — collaborating with peers to solve technical challenges.
- Practiced exploiting and remediating web vulnerabilities, including SQL injection, XSS, path traversal, fuzzing, and misconfigurations.

Education

Ajloun National University *Ajloun, Jordan*

Expected Graduation: 2028

- B.Sc. in Cybersecurity and Cloud Computing
